Overview

The demand for bandwidth in the metro space is constantly rising. It's being fueled by the boom in cloud computing and the hunger for mobile broadband, both of which create the need for traffic aggregation. As a result, business and mobile network operators are rolling out 10Gbit/s services in their networks, driving the demand for 100/400Gbit/s demarcation and aggregation at the metro edge. Our FSP 150-XG400 Series is a family of carrier-class packet edge products that enable MEF 3.0 CE 100Gbit/s demarcation and high-scale 10/100Gbit/s service aggregation in a compact form factor.

Our FSP 150-XG400 Series is designed for high-density aggregation and demarcation of MEF 3.0 CE services and IP services. The products feature 1GbE, 10GbE, 25GbE, 40GbE, 100GbE, and 400GbE interfaces for high-speed connectivity to the metro core and support hardware-based time distribution on all traffic ports (Synchronous Ethernet and IEEE 1588). The XG400 Series provides standard Ethernet OAM and Y.1564 for service activation testing up to 100Gbit/s. It supports IP/MPLS capabilities, for the delivery of EVPN services and L3VPN services. It also features a wide range of traffic protection mechanisms including IEEE 802.1AX DRNI, ITU-T G.8032, ERPS and VRRP for high service availability. A common software stack assures consistent operation with any member of this series. What's more, the FSP 150-XG400 Series has been designed to work in locations with no temperature control.
