Overview

The Adtran 7310-08 is a micro-sized indoor LoRaWAN Internet of Things (IoT) gateway that is perfect for enterprises, small businesses, and industrial IoT applications. This 8-channel gateway supports an external antenna, has one Gigabit interface and can be powered by 802.11af PoE or a Micro USB connector. This device provides a reliable connection to a public or private Long Range Wide Area Network (LoRaWAN) network. It is designed and built specifically for IoT machine-to-machine communications.

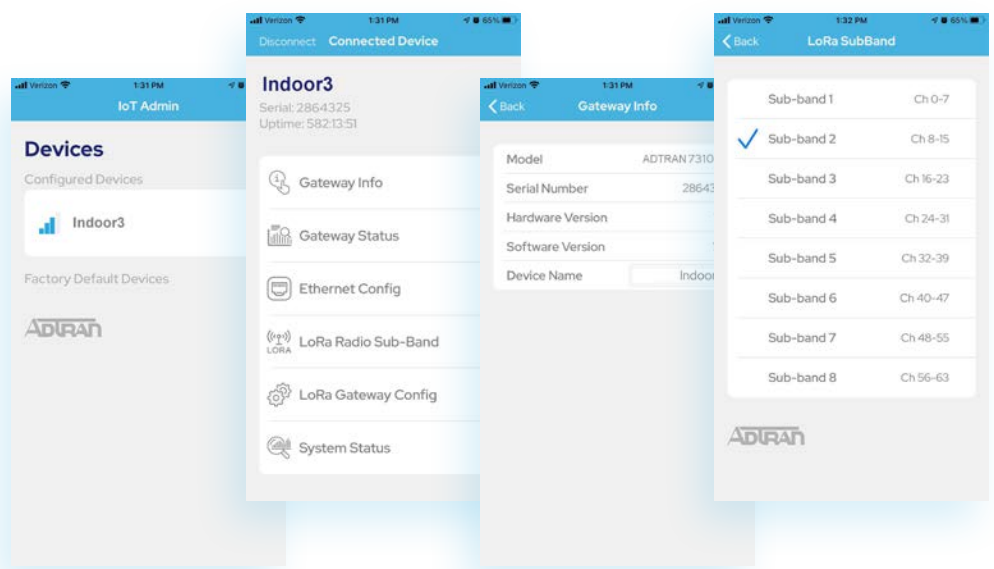

Long Range Wide Area Network

LoRaWAN is a very low-cost wireless network that has long range and uses small amounts of power, making it the perfect choice for dedicated, battery-powered sensors.

With all the sensors available in the IoT market, the applications are endless, and once a LoRaWAN network is established, multiple overlaying IoT applications can share the same network.
